

Matrix Loop

58 kHz AM EAS System

The Matrix Loop is a discreet EAS system, available in 58 kHz (AM) or 66 kHz frequencies, ideal for installation into environments where store designers do not wish to install EAS pedestals. The Matrix Loop consists of a loop of wire, installed into, or against the doorframe of the store. The only visible sign of the EAS system is small aerials, located against the doorframe to detect the presence of a tag. However, staff will still be alerted to an event by an audible alarm, like a conventional EAS system. This unobtrusive solution can be used to protect standard doorways of up to 4m, and is ideal for high value apparel stores.

Features

- Discreet: only a small antenna is visible.
- Aesthetic: Store design is not affected by the protection.

Product Specifications

Operation:

| | |
|-----------|----------------|
| Frequency | 58kHz or 66kHz |
| Power | 120-240 V a.c |

Product Code:

| | |
|--------|---------------------------|
| MA2400 | 2 Meter Wide Installation |
| MA2401 | 4 Meter Wide Installation |
